

# **Sprint 2 Report - May 8th, 2018 Santa Cruz Community Resources**

Alec McLeod - Product Owner  
Zhanhua “Kobe” Hu - Sprint Master  
Isaac Avram  
Paul May

## **Actions to Stop Doing**

As a team, I think that we should be more active through our communication channels (e.g. Slack).

## **Actions to Start Doing**

We should start giving each other more constructive feedback outside of the TSRs—to be quite frank, maybe this should be addressed during or after Scrum meetings. We believe that more constructive criticisms can really elevate our team. Along with this, we should start documenting our code better.

## **Actions to Keep Doing**

As a team, we should continue to commit often and practice good coding practices, as we have been doing.

## **Work Completed**

- As a user, I want a good looking layout and logo so that I find the website more appealing to use.
- As a user, I want to be able to see the website listing for the event or service so that I can arrange the date to attend.
- As a user, I want a simple and immediately available interface to search event by tags and location.
- As an administrator, I would like to be able to add a location to each event so that I can implement an *add my location* feature.
- As a user, I want to be able to view the calendar client in the browser so that I can get an idea of services available in the county.
- As a user, I want a Google Map in the details page so that I can more easily locate my destination.

## Not Completed

- As a developer, I want to implement Django get and posts so that we have decoupled endpoints for microservices we would like to implement.
- As a user, I want to export the events to as an iCal link so that I can also see and manage the events on my Apple device(s).
- As a developer, I want to implement distance based sorting so that the user can first see what events are closest to them.
- As a developer, I want to implement Google Calendar search functionality so that the end users may search for specific events.

## Work Completion Rate

During this sprint, the team completed 35 ideal work hours of tasks in the six user stories completed. It was a 14 day sprint.

## Burnup Chart
