Actions to Stop Doing

As a team, we need to stop being inconsistent with our meetings, it is compromising the amount of time we spend together discussing the project, and working together to come to solutions.

Actions to Start Doing

It would be beneficial to the team to start scheduling times to work in the same room or pair programming sessions. There is a disconnect between those that know about certain technologies and those who don't, and this is leading to confusion and inefficiency.

Actions to Keep Doing

In this sprint, we accurately estimated the amount of work to be done, and what we would be able to complete. If we can continue that in future sprints, we will complete our project in a timely fashion.

Work Completed

- As a developer, I want to become familiar with the technologies we are going to use so that I can be effective.
- As a developer, I want to have an organized django framework so that I can more effectively create this web app.
- As a user I would like to have a landing page so that I can access different parts of the website.

Not Completed

- As a user I would like to have a login page so that I can access administrator privileges.

As a qualifier for this work not completed, it was determined in the research and design phase to not be necessary. As such, it is not a negative to the sprint, merely passed over in favor of a different set-up.

Work Completion Rate

During this sprint, the team completed 33 ideal work hours of tasks in the three user stories completed. It was a 14 day sprint in which the bulk of our teams time was consumed with researching and learning new technologies.
